The introduction of XM Radio has been a godsend to the trucking industry. It has enabled drivers to be able to get quality programming, not just what the "local guys" want you to listen to. The ability to listen to traffic and weather information in a major city that I may be hundreds of miles away from helps me to plan when I can get through that town at the least congested time, therefore not adding to the congestion and pollution problems that plague all large cities. NAB's petition 04-160 should be REJECTED simply because of the reason stated above, not to mention the fact that I pay for my XM, and should be able to listen to whatever I chose. If the local stations feel threatened, maybe they should improve their service, not attack some media that is giving what people want and need.
